PROFESSIONAL SUMMARY

Senior Regional Operations and SaaS Delivery Leader with extensive experience leading multi-site operations, enterprise software implementations, customer service delivery, and technical teams within hospitality and SaaS environments.

Proven success managing regional budgets, operational costs, workforce planning, profitability, and service delivery performance across a portfolio of nearly 700 clients.

Experienced in driving operational excellence through CRM systems, Microsoft Excel reporting, AI-assisted productivity tools, preventative maintenance planning, and continuous process improvement. Passionate about leveraging technology, automation, and data-driven decision-making to improve customer outcomes and operational performance.

LEADERSHIP IMPACT HIGHLIGHTS

- Managed regional operations and service delivery across a portfolio of nearly 700 active clients
- Led and developed 40+ cross-functional staff across support, implementation, consulting, cabling operations, and sales coordination
- Supported recurring multi-million-rand revenue streams through operational excellence and customer retention initiatives
- Successfully managed and supported 700+ SaaS implementations across enterprise and multi-location customers
- Reduced implementation timelines by 25% through process standardization and operational improvements
- Led customer escalation management, operational risk mitigation, and service delivery coordination across multiple regions
- Partnered with product, engineering, support, and sales teams to improve workflows and customer outcomes
- Applied Agile operational practices to drive continuous improvement and scalable growth
- Supported regional budget ownership, operational forecasting, gross profit performance, and cost control across multiple branches
- Managed operational expenditure including staffing, overtime, fleet utilisation, procurement approvals, and regional resource allocation
- Improved operational efficiency through CRM reporting, Microsoft Excel analysis, AI-assisted productivity tools, and continuous process optimisation
- Coordinated preventative maintenance planning for customer hardware infrastructure and software version upgrades to maximise system reliability

PROFESSIONAL EXPERIENCE

Regional Operations Manager & Service Delivery Manager

GAAP Point-of-Sale (B2B SaaS Platform) 2013 – Present

Lead regional SaaS operations and enterprise service delivery across multi-site clients, overseeing customer onboarding, implementation execution, operational coordination, team leadership, and post-go-live success initiatives.

- Manage and lead 40+ cross-functional staff across the Western Cape (Garden Route) and Eastern Cape regions
- Oversee technical support, customer software support, implementation consulting, GDT/cabling operations, and sales coordination
- Manage workforce planning, resource allocation, operational prioritization, and cross-department collaboration
- Drive operational consistency, customer retention, service excellence, and scalable business growth
- Develop operational frameworks supporting customer success and long-term retention
- Coordinate customer escalations, service delivery standards, and operational risk management
- Managed regional operational budgets, workforce planning, branch expenditure, overtime approval, procurement approvals, and resource allocation to achieve operational and financial objectives
- Monitored branch profitability, gross profit performance, operational costs, and service delivery metrics, implementing corrective actions to improve operational efficiency
- Utilised CRM systems and Microsoft Excel reporting to monitor KPIs, analyse operational trends, improve resource utilisation, and support strategic decision-making
- Coordinated preventative maintenance schedules for customer hardware infrastructure, software upgrades, and system version management to maximise uptime and minimise operational disruption
- Leveraged AI tools including ChatGPT, Claude, and Copilot to improve documentation, reporting, operational planning, customer communication, and process efficiency
- Currently expanding expertise in workflow automation using n8n and AI voice agents to support future automation and digital transformation initiatives
- Produced operational performance reports and analysed business data using CRM reporting and Microsoft Excel to identify trends, monitor KPIs, and support continuous improvement initiatives

Software Implementation & Support Specialist

GAAP Point-of-Sale (B2B SaaS Platform) 2006 – 2013

Delivered hands-on SaaS implementations and technical support across live customer environments, supporting platform growth and regional expansion.

- Implemented SaaS solutions including system configuration, database setup, user training, and go-live support
- Provided first- and second-line technical support for software and hardware issues
- Supported product rollouts, customer retention, and platform adoption initiatives
- Collaborated with regional teams to standardize onboarding practices and improve support response times
- Gathered customer feedback and worked with development teams to improve product readiness
